

The banner features a dark background with glowing green circuit board patterns. At the top left is the Indian Data Club logo. In the top right corner is a search bar containing "indiandataclub.com | Q". The main title "21 DAYS" is in large white capital letters, followed by "SQL CHALLENGE" in green capital letters. Below the title, text reads "CHALLENGE STARTS FROM" above a white box containing "3RD NOVEMBER 2025". In the center is a stylized 3D rendering of a server stack with glowing green data streams. At the bottom left is a dark rectangular button with "REGISTRATION IS" in white, followed by "LIVE" in large white letters. To the right of the button is a QR code with the text "SCAN HERE" above it. The bottom right corner contains the hashtag "#SQLWithIDC".

Day 2 (04/11): Filtering Data with WHERE Clause

Objective

Learn how to filter rows from a table using conditions to display only relevant data.

Topics Covered

- WHERE Clause
- OPERATORS USED WITH WHERE CLAUSE
 - COMPARISON OPERATORS
 - LOGICAL OPERATORS
 - RANGE OPERATOR
 - MEMBERSHIP OPERATOR
 - SEARCH OPERATOR
 - NULLABILITY OPERATOR

WHERE Clause

The WHERE clause in SQL is used to filter records.

It is used to specify a condition so that only those rows that meet the condition are returned.

SYNTAX

```
SELECT  
column1, column2, ...  
FROM table_name  
WHERE condition;
```

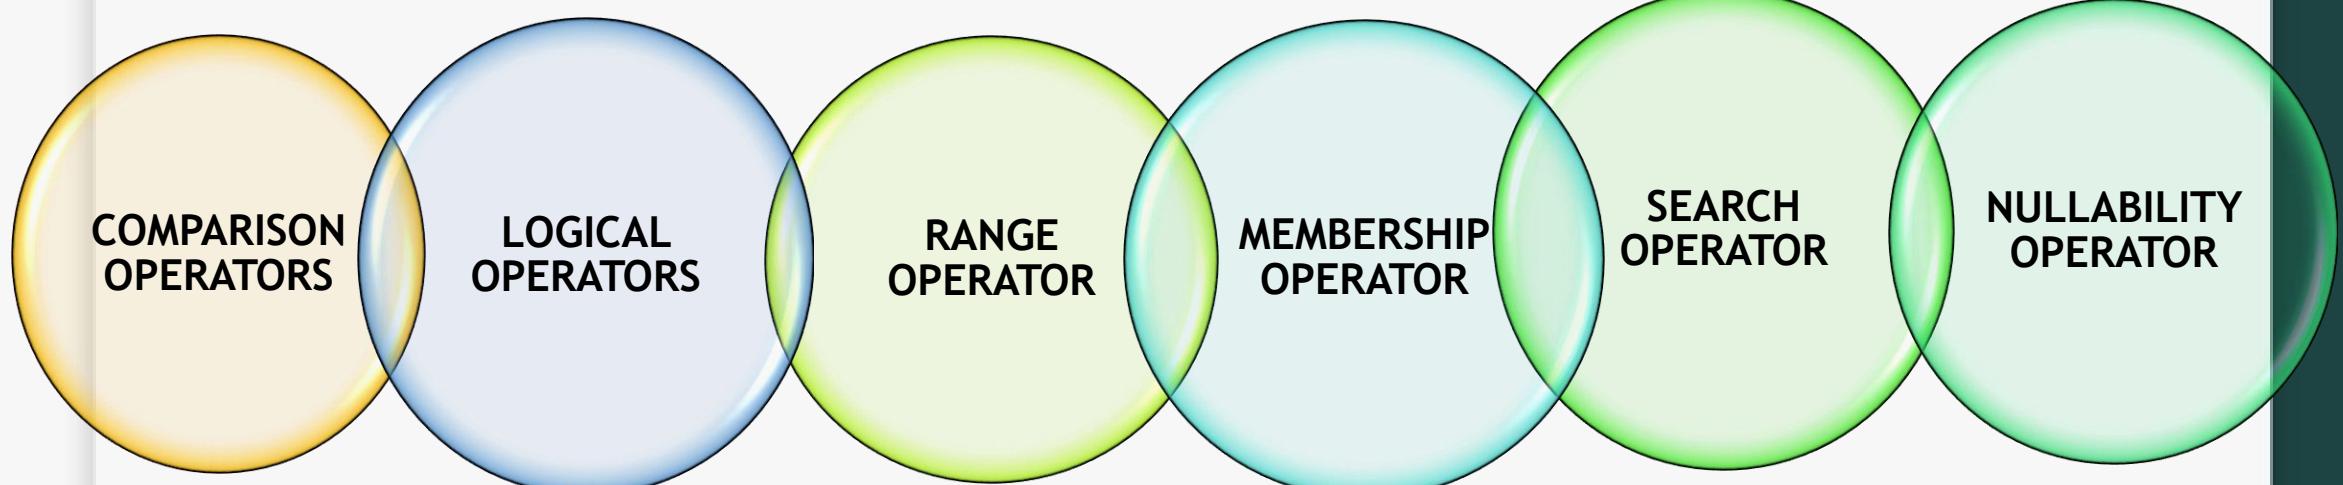

SYNTAX

```
SELECT *  
FROM table_name  
WHERE condition;
```

OPERATORS USED WITH WHERE CLAUSE

In MySQL, operators used with the WHERE clause help filter rows based on specific conditions.

These operators are classified into the following categories:

=
<> , !=
>
>=
<
<=

AND
OR
NOT

BETWEEN

IN
NOT IN

LIKE
NOT LIKE

IS NULL
IS NOT NULL

❖ COMPARISON OPERATORS

Comparison operators in SQL are used to compare one value with another in a query condition. They help determine which rows from a table match specific criteria – for example, finding values greater than, less than, or equal to a certain number.

= Checks if two values are equal

<> != Checks if two values are not equal

> Checks if a value is greater than another value.

>= Checks if a value is greater than or equal to another value

< Checks if a value is less than another value

<= Checks if a value is less than or equal to another value

❖ LOGICAL OPERATORS

Logical operators are used in SQL to join two or more conditions.
They return rows only if the combined condition is true.

AND

All conditions must be TRUE

OR

At least one condition must be TRUE

NOT

(Reverse) Excludes matching values

❖ RANGE OPERATOR

BETWEEN OPERATOR :-

BETWEEN

Check if a value is within a range

The BETWEEN operator is used to **filter values within a specific range** (inclusive of the start and end values).
It works with **numbers, dates, or text**.

Syntax :-

```
SELECT column_name  
FROM table_name  
WHERE column_name BETWEEN value1 AND value2;
```

❖ MEMBERSHIP OPERATORS

IN OPERATOR :-

IN

Check if a value exists in a list

The IN operator is used to check if a value matches any value in a given list.

Syntax :-

```
SELECT column_name  
FROM table_name  
WHERE column_name IN (value1, value2, value3, ...);
```

NOT IN OPERATOR :-

NOT IN

Check if a value does not exist in a list

The NOT IN operator is used to filter the records **where a value is *not present* in a given list of values**. It is the opposite of the IN operator.

Syntax :-

```
SELECT column1, column2, ...
FROM table_name
WHERE column_name NOT IN (value1, value2, ...);
```

❖ SEARCH OPERATORS

LIKE Operator

LIKE

Search for a pattern in text

The LIKE operator in SQL is used to search for values that match a specific pattern in a text column, such as names, cities, or sports.

Syntax :-

```
SELECT column_name  
FROM table_name  
WHERE column_name LIKE 'pattern';
```

The LIKE operator uses special wildcard characters –

- % represents any number of characters
- _ represents a single character

This makes it useful for finding text that starts with, ends with, or contains certain letters or patterns.

NOT LIKE Operator

NOT LIKE

Exclude a pattern from the text

The NOT LIKE operator is used to **exclude rows** that match a certain pattern.
It returns rows **where the pattern does not match**.
It is the opposite of the LIKE operator.

Syntax :-

```
SELECT column_name  
FROM table_name  
WHERE column_name NOT LIKE 'pattern';
```

❖ NULLABILITY OPERATORS

IS NULL / IS NOT NULL

- IS NULL is used to check if a column **has no value** (i.e., it is empty or undefined).
- IS NOT NULL checks if a column **has some value** (i.e., it is not empty).

You cannot use = NULL or != NULL – instead, use IS NULL or IS NOT NULL.

Syntax :-

```
SELECT column_name
FROM table_name
WHERE column_name IS NULL;
```

```
SELECT column_name
FROM table_name
WHERE column_name IS NOT NULL;
```

Practice Questions:

```
1 -- Find all patients who are older than 60 years.  
2 • SELECT *  
3 FROM patients  
4 WHERE age > 60 ;  
5  
6
```

Result Grid | Filter Rows: Edit: Export/Import: Wrap Cell Content:

| patient_id | name | age | arrival_date | departure_date | service | satisfaction |

Practice Questions:

```
1 -- List all weeks where more than 100 patients requested admission in any service.  
2 • SELECT  
3     week,  
4     service,  
5     patients_request  
6 FROM services_weekly  
7 WHERE patients_request > 100;  
8
```

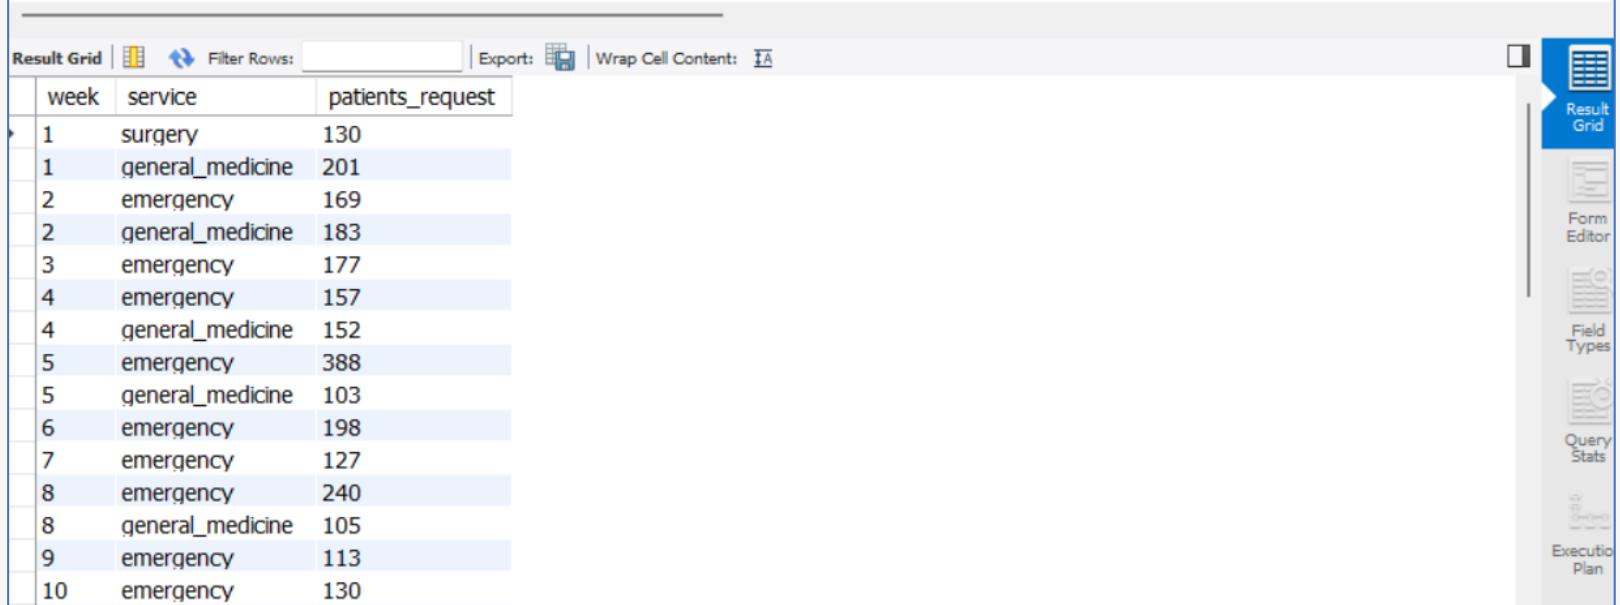

Result Grid |  Filter Rows: Export:  Wrap Cell Content: 

The screenshot shows a database query results grid. The columns are labeled 'week', 'service', and 'patients_request'. The data is as follows:

| | week | service | patients_request |
|----|------|------------------|------------------|
| 1 | 1 | surgery | 130 |
| | 1 | general_medicine | 201 |
| 2 | 2 | emergency | 169 |
| | 2 | general_medicine | 183 |
| 3 | 3 | emergency | 177 |
| 4 | 4 | emergency | 157 |
| | 4 | general_medicine | 152 |
| 5 | 5 | emergency | 388 |
| | 5 | general_medicine | 103 |
| 6 | 6 | emergency | 198 |
| 7 | 7 | emergency | 127 |
| 8 | 8 | emergency | 240 |
| | 8 | general_medicine | 105 |
| 9 | 9 | emergency | 113 |
| 10 | 10 | emergency | 130 |

Result Grid |  Filter Rows: Export:  Wrap Cell Content: 

The interface includes a sidebar on the right with the following options:

- Result Grid (selected)
- Form Editor
- Field Types
- Query Stats
- Executive Plan

Daily Challenge:

```
1  -- Find all patients admitted to 'Surgery' service
2  -- with a satisfaction score below 70,
3  -- showing their patient_id, name, age, and satisfaction score.
4
5 • SELECT
6      patient_id,
7      name,
8      age,
9      satisfaction
10     FROM patients
11     WHERE service = "surgery" AND
12         satisfaction < 70;
```

Result Grid | Filter Rows: _____ | Edit: | Export/Import: | Wrap Cell Content:
