Day 4 (06/11): LIMIT and OFFSET

🎯 Objective

Learn how to limit the number of rows returned and view data page-by-page using LIMIT and OFFSET

🔍 Topics Covered

➤ LIMIT

Restricts the number of rows returned by the query.

Example:- `SELECT * FROM patients LIMIT 5;`

→ Shows only the first 5 records.

➤ OFFSET

Skips a certain number of records before starting to return rows.

Example:- `SELECT * FROM patients LIMIT 5 OFFSET 10;`

→ Skips first 10 records, then shows the next 5.

LIMIT Clause

The LIMIT clause is used to **restrict the number of rows** returned by a SQL query. It is especially useful when you want to **view only a few records** from a table — For example, while testing or displaying top results. When combined with the ORDER BY clause (either ASC for ascending or DESC for descending), LIMIT can help fetch the **top** or **bottom** entries based on any column such as pay, age, or name.

Syntax :-

```
SELECT column1, column2 FROM  
table_name  
LIMIT number;
```

OFFSET

The **OFFSET** clause is used to **skip a specific number of rows** before the SQL query starts returning results.

It is especially useful when you don't want to start displaying data from the first row. For example, while creating **pagination** (page 1, page 2, page 3...) in dashboards or applications.

When used with **LIMIT**, **OFFSET** helps you fetch records **starting from a particular position** – e.g., skip the first 10 rows and show the next 5.

Practice Questions:

```
1  -- Display the first 5 patients from the patients table.
2 • SELECT *
3  FROM patients
4  LIMIT 5 ;
```

Result Grid | Filter Rows: | Edit: | Export/Import: | Wrap Cell Content: | Fetch rows:

patient_id	name	age	arrival_date	departure_date	service	satisfaction
PAT-003ce690	Larry Dixon	29	2025-01-19	2025-01-21	ICU	60
PAT-00883d3c	Victor Taylor	0	2025-11-06	2025-11-13	ICU	84

PAT-02ae68da	Corey Whitaker	36	2025-08-27	2025-09-10	ICU	63
NULL	NULL	NULL	NULL	NULL	NULL	NULL

This query retrieves
**only the first 5
records** from the
patients table.

Practice Questions:

```
6  -- Show patients 11-20 using OFFSET.  
7 • SELECT *  
8  FROM patients  
9  LIMIT 10  
10 OFFSET 10 ;
```

patient_id	name	age	arrival_date	departure_date	service	satisfaction

HULL	HULL	HULL	HULL	HULL	HULL	HULL

This query skips the first 10 records and then returns the next 10 rows from the patients table.

It is commonly used for pagination, like showing records from patient 11 to 20.

Practice Questions:

```
12  -- Get the 10 most recent patient admissions based on arrival_date.
13 • SELECT *
14   FROM patients
15   ORDER BY arrival_date DESC
16   LIMIT 10 ;
```

HULL	HULL	HULL	HULL	HULL	HULL	HULL	

This query sorts patients by arrival date (newest first) and returns the 10 most recent admissions.

Daily Challenge:

```
1  -- Find the 3rd to 7th highest patient satisfaction scores from the patients table,
2  -- showing patient_id, name, service, and satisfaction.
3  -- Display only these 5 records.
4
5 • SELECT
6     patient_id,
7     name,
8     service,
9     satisfaction
10  FROM patients
11  ORDER BY satisfaction DESC
12  LIMIT 5
13  OFFSET 2 ;
```

This query sorts patients by **highest satisfaction score first**, skips the top 2 results, and returns the **next 5 patients** (i.e., 3rd to 7th highest satisfaction scores).
